

3X3I SYSTEMS

ABSTRACT

3x3i System is specially designed for the top management to gauge the status of the projects at any given time at one glance. 3x3i System creates an information repository for the development team as well as the management.

3x3i System has inbuilt features to act as a tool to imbibe all aspects of Project Management System, Total Quality Management System and Management Information Systems, hence the name 3x3i System. All Associates, Team/Project Leaders, Project Manager and top Management are the users of this system.

Before the project is initiated, the Project Manager needs to understand the development cycle and prepare the SRS to enable the team work seamlessly. The modules are split and assigned as tasks to the team leaders and associates with timeframe and accepted milestones. On a daily basis the task is performed and recorded for the perusal of the Team Leaders and Project Manager. These tasks are monitored and tested for quality (with help of checklists) before submitting as per the milestone
