

Inventory Management System

Inventory Management System is a computerized user-friendly menu-driven software implemented in Visual Basic. The software is planned in relational database, and ORACLE has been chosen as the medium of approach. Using this system, the time and effort needed to input and process data in addition to generating reports is reduced. The system's front end is based on Visual Basic 6.0 and the back end is Microsoft Access.

You can download the complete source code and project files of Inventory Management System software from the download links in the post. The project report and full documentation are also available for download. Below, I've briefly introduced the project abstract and system specifications along with some screenshots.
